Branch- BTech Computer Science (Specialization in Artificial Intelligence and Machine Learning)

Year- 1st year

Course Code- CSE0001

Date- 26/03/2026

Digital Literacy Project Report

Introduction

This project was very useful for learning basic digital skills and understanding how to use different online platforms. Before starting this project, I was not very confident in using tools like GitHub, Canva, or Google Forms. Through these tasks, I learned how to create files, organize folders, and upload my work properly. I also learned how to present information clearly using images, text, and proper formatting.

Each task helped me learn something new. I understood how to create an infographic, build a digital portfolio, practice coding, and communicate professionally. I also improved my ability to write in simple and clear words so that others can easily understand my work. Sometimes I faced difficulties, especially while using new platforms, but I solved them by practicing and exploring the tools.

Overall, this project helped me become more confident in using technology. It also improved my organization, communication, and presentation skills. I believe these skills will help me a lot in my future studies and career.

Digital Literacy Project Report

Task 1 Write-up

In Task 1, I created a digital literacy awareness infographic using Canva. The main aim was to explain what digital literacy means and why it is important. I included topics like safe internet practices, useful digital tools for students, and email etiquette. At first, I found it difficult to design the infographic because I was not familiar with Canva. But after exploring different templates and tools, I was able to create a simple and clear design.

I learned how to use colors, icons, and text properly to make the infographic attractive and easy to understand. I also understood that too much information can confuse the reader, so I tried to keep it simple and clear. After completing the design, I exported it and added it to my project folder.

This task helped me improve my creativity and presentation skills. It also taught me how to share information in a visual format. Overall, it was an interesting experience, and I enjoyed learning a new design tool.

Digital Literacy Project Report

Task 2 Write-up

In Task 2, I created my student digital portfolio using platforms like Kaggle, GitHub and LinkedIn. I set up my profiles and added basic details such as my name, branch, and education. I also created a README file on GitHub to introduce myself. Initially, I found it confusing to understand how these platforms work, but after following the steps, I was able to complete everything.

I learned that having an online presence is very important for students. These platforms help in showing our skills and achievements. I also took screenshots of my profiles and added them to the required folder as proof of my work.

This task helped me understand how I can use these platforms in the future. I plan to update my profiles regularly and add my projects and achievements. Overall, this task was very useful as it introduced me to professional platforms and helped me build my digital identity.

Digital Literacy Project Report

Task 3 Write-up

In Task 3, I explored coding and collaboration platforms. I created an account on “CodeChef” and completed level-1 Python online Test and Quiz. It was a new experience for me, and I learned how coding platforms work. I also took a screenshot of my completed task and uploaded it to the project folder.

In the second part, I created a Google Form with questions related to digital literacy. I included both multiple-choice and short-answer questions. I also checked the response sheet to understand how the answers are collected. Then, I shared the form link and added screenshots as required.

This task helped me understand how these tools can be used for learning and collaboration. It also improved my confidence in trying new platforms. I realized that these tools can help me in my studies and future projects. Overall, this task was very useful and practical.

Digital Literacy Project Report

Task 4 Write- up

In Task 4, I learned about professional email writing and social media etiquette. I wrote two emails—one to a professor requesting an extension and another to an internship coordinator. I learned how to write a proper subject line, greeting, and closing. I also understood the importance of using polite and clear language.

In the second part, I created a checklist of do's and don'ts for social media use. I included points like not sharing personal information, being respectful, and avoiding fake content. This helped me understand how to behave responsibly online and stay safe while using online platforms and cyber security.

This task improved my communication skills. I learned that small details in writing are very important in professional communication. It also made me more aware of my online behavior. Overall, this task was very helpful for improving both writing and digital responsibility and security.

Digital Literacy Project Report

Task 5 Write-up

In Task 5, I worked on a cybercrime awareness case study and prevention checklist. I chose a cybercrime topic and wrote about how it happens, who is affected, and its consequences. This helped me understand real-life online threats. I also created a checklist with tips to stay safe online, especially for students.

I learned about safe practices like not sharing OTPs, using strong passwords, and being careful with unknown links. I also included information about reporting cybercrime through official portals. This made me more aware of online safety.

One thing that surprised me was how common these cybercrimes are. I realized that even small mistakes can lead to serious problems. One habit I will change is being more careful while using online platforms.

Overall, this task was very informative and helped me understand how to stay safe online.

Digital Literacy Project Report

Conclusion

In conclusion, this project was a very good learning experience for me. It helped me understand how to use different digital tools and platforms in a practical way. I learned how to create content, manage files, and present my work clearly. Each task helped me improve different skills such as creativity, communication, and technical knowledge.

I also became more confident in using tools like GitHub, Canva, and Google Forms. I learned how to organize my work and avoid common mistakes. This project also made me more aware of online safety and responsible digital behavior.

Overall, I believe this project has helped me grow both academically and personally. The skills I learned will be useful in my future studies and career. I am happy that I completed this project successfully.
